Introduction

FocusBuddy is a mobile productivity coaching app designed specifically for people who struggle with executive dysfunction — including those with ADHD, anxiety, or depression. Unlike traditional productivity apps that rely on guilt and pressure, FocusBuddy takes a **shame-free** approach: meeting users where they are, scaling expectations to energy levels, and celebrating small wins.

Core Philosophy

- No shame, no guilt — the app actively detects and intervenes when users spiral
- Energy-aware — tasks and expectations scale to how the user feels right now
- AI companion — a warm, supportive chat partner (GPT-4o-mini) that remembers context
- Trust Score — builds self-trust through daily promises kept over time
- Bad Day support — dedicated toolboxes for when everything feels impossible

Who It's For

- People with ADHD who struggle with task initiation and time blindness
- People with anxiety or depression who experience shame spirals around productivity
- Anyone with executive dysfunction who needs gentle, structured accountability

The app is built with React Native (Expo SDK 55), uses Supabase for the backend (Postgres, Auth, Row-Level Security), Zustand for state management, MMKV for synchronous local persistence, and OpenAI GPT-4o-mini for AI features delivered through Supabase Edge Functions.

Journey Overview

The FocusBuddy experience follows a natural daily rhythm. Below are the 8 primary user flows that make up the complete app journey.

Flow 1 — New User Onboarding

Sign Up → Goal Setup → Notification Time → Trial Confirmation → Home

Flow 2 — Returning User

Sign In → Home Dashboard

Flow 3 — Daily Check-In & Focus Session

Home → Check-In → Timer → Session Rating → Home

Flow 4 — AI Chat & Support

Home / Quick Action → Chat | If shame detected → Shame Emergency

Flow 5 — Progress Tracking

Home / Tab → Progress Analytics (charts, milestones, history)

Flow 6 — Daily Promises

Home / Quick Action → Promises → Set promise → Mark kept or broken

Flow 7 — Bad Day Recovery

Check-In (Need a break) → Bad Day Toolbox | Shame Emergency → Tiny Steps

Flow 8 — Account Management

Settings → Edit Profile / Delete Account / Data Export / Upgrade

1. Getting Started

When the app launches, the root layout checks the user's authentication state via Supabase. Unauthenticated users are directed to the Sign In screen. From here, users can sign in, create an account, or recover their password.

Sign In

`app/(auth)/sign-in.tsx`

What You See

- FocusBuddy logo with purple "F" icon and app name
- Tagline: "Your shame-free focus companion"
- Email input field
- Password input field with secure entry
- "Forgot Password?" link
- Sign In button (primary, full-width)
- "Don't have an account? Sign Up" link at the bottom
- Error banner when credentials are invalid

What You Can Do

- Enter email and password → tap Sign In → authenticates with Supabase
- Tap "Forgot Password?" → navigates to Forgot Password screen
- Tap "Sign Up" → navigates to Sign Up screen

Where It Leads

- **Successful sign-in** → Home Dashboard (tabs)
- **Forgot password** → Forgot Password screen
- **Sign up** → Sign Up screen

Sign Up

`app/(auth)/sign-up.tsx`

What You See

- Header: "Create Account" with subtitle "Start your shame-free journey"
- Display Name input field
- Email input field
- Password input (minimum 8 characters enforced)
- Confirm Password input

- "Create Account" button (primary, full-width)
- "Already have an account? Sign In" link
- Inline validation messages (password mismatch, length)

What You Can Do

- Fill all 4 fields → tap Create Account → creates Supabase auth user + profile row
- Tap "Sign In" → navigates back to Sign In screen

Where It Leads

- **Successful sign-up** → Onboarding: Goal Setup (Step 1)
- **Already have account** → Sign In screen

Forgot Password

`app/(auth)/forgot-password.tsx`

What You See

- Header: "Reset Password" with description
- Email input field
- "Send Reset Link" button
- "Back to Sign In" link
- Success state: "Check your email" message with email icon

What You Can Do

- Enter email → tap Send Reset Link → Supabase sends password reset email
- Tap "Back to Sign In" → returns to Sign In

Where It Leads

- **Email sent** → user clicks link in email → Reset Password screen
- **Back** → Sign In screen

Reset Password

`app/(auth)/reset-password.tsx`

What You See

- Header: "Set New Password"
- New Password input (min 8 characters)
- Confirm Password input
- "Update Password" button

- Validation error messages

What You Can Do

- Enter and confirm new password → tap Update Password → updates via Supabase Auth

Where It Leads

- **Password updated** → Home Dashboard

2. Onboarding

After creating an account, new users complete a simple 3-step onboarding process. This personalises the app by setting a primary goal, choosing a daily check-in time, and confirming the 7-day free trial.

Goal Setup (Step 1 of 3)

`app/(onboarding)/goal-setup.tsx`

What You See

- Progress bar filled to 1/3
- Heading: "What's your main goal right now?"
- Large multi-line text input (10–500 characters)
- Live character counter with colour feedback
- Example goal chips (tappable):
 - "Write my thesis"
 - "Launch a side project"
 - "Study for exams"
 - "Build a habit"
- Continue button (disabled until 10+ characters entered)

What You Can Do

- Type a goal or tap an example chip to auto-fill
- Tap Continue → passes goal to next step

Where It Leads

- **Continue** → Notification Time (Step 2)

Notification Time (Step 2 of 3)

`app/(onboarding)/notification-time.tsx`

What You See

- Progress bar filled to 2/3
- Heading: "When should we check in with you?"
- 4 preset time buttons:
 - Morning (8 AM)
 - Midday (12 PM)
 - Afternoon (3 PM)

■ Evening (7 PM)

- "Custom Time" option → expands to show 24-hour picker
- Selected option shows a checkmark
- Continue button (disabled until time selected)

What You Can Do

- Tap a preset time or choose a custom hour
- Tap Continue → passes goal + notification hour forward

Where It Leads

- **Continue** → Trial Confirmation (Step 3)

Trial Confirmation (Step 3 of 3)

app/(onboarding)/trial-confirmation.tsx

What You See

- Progress bar filled to 3/3
- Heading: "You're all set!" with gradient illustration
- Trial info card:
 - 7-day free trial announcement
 - Start date and end date
 - Feature highlights: "Full access", "No credit card needed", "Cancel anytime"
- "Start Using FocusBuddy" button (green accent)

What You Can Do

- Tap Start → creates goal record, profile, and subscription with 7-day trial

Where It Leads

- **Start** → Home Dashboard (main app)

3. Home Dashboard

The Home tab is the user's central hub. It adapts based on whether they've completed today's check-in, showing either a prompt to check in or a task card with today's AI-generated tasks. Data refreshes every time the tab gains focus.

Home Dashboard

`app/(tabs)/index.tsx`

What You See

- **Greeting Header** — "Good morning, [Name]" with current streak count and fire emoji
- **If NOT checked in today:**
 - Prompt card: "Ready to check in?" with "Start Check-In" button
- **If checked in today:**
 - Goal Card showing today's AI-generated tasks with toggle checkboxes
 - Tasks can be checked off individually
- **Stat Cards** — two side-by-side cards: Focus Minutes Today and Current Streak
- **Quick Actions** — 4 tappable action buttons:
 - Start Session → Timer
 - Chat → AI Chat
 - Progress → Analytics
 - Promises → Promises screen
- **Activity Feed** — timeline of recent sessions and check-ins with timestamps
- Pull-to-refresh enabled for all data

What You Can Do

- Tap "Start Check-In" → opens Daily Check-In
- Toggle task checkboxes → marks tasks complete (optimistic UI + DB sync)
- Tap any Quick Action button → navigates to respective screen
- Pull down → refreshes all dashboard data

Where It Leads

- **Start Check-In** → Daily Check-In
- **Start Session** → Timer
- **Chat** → AI Chat
- **Progress** → Progress Analytics
- **Promises** → Promises screen

4. Daily Check-In

The daily check-in is the heart of FocusBuddy. Each morning (or whenever the user is ready), they report their energy level, share what's on their mind, and receive AI-generated tasks **scaled to their current energy**. This is not a to-do list app — it's an energy-aware coaching session.

Daily Check-In

app/check-in.tsx

What You See

- Modal header: "Daily Check-In"
- **Step 1 — Energy Level:** 4 large emoji buttons:
 - Good (high energy, ready to work)
 - Meh (moderate energy, can manage)
 - Low (struggling but present)
 - Need a break (cannot work today)
- **Step 2 — What's on your mind?** — free-text input for context
- **Step 3 — AI-Generated Tasks:**
 - AI response message with encouragement
 - 2–5 task cards scaled to energy level
 - Each task shows estimated time
 - Low energy = very easy/short tasks, high energy = medium/harder options
- **Step 4 — Time Commitment:** preset buttons (15, 25, 50 min) or custom
- Confirm button to finalise

What You Can Do

- Select energy level:
 - "Need a break" → routes immediately to Bad Day Toolbox
 - Any other level → continues to Step 2
- Type what's on your mind → AI generates personalised tasks via ai-checkin Edge Function
- Select/deselect tasks → choose which to commit to
- Tap "Make smaller" on any task → AI re-decomposes into even simpler steps
- Pick time commitment → sets session length
- Tap Confirm → creates check-in record in database

Where It Leads

- **Need a break** → Bad Day Toolbox
- **Shame detected in message** → Shame Emergency
- **Confirmed** → Home Dashboard (with tasks now visible on Goal Card)

5. Focus Session (Timer)

The Focus Timer is a clean, distraction-free timer that helps users work in focused intervals. It persists state across app backgrounding using MMKV storage and reconciles elapsed time when the app returns to the foreground.

Focus Timer

app/timer.tsx

What You See

- Large circular timer display (MM:SS) with animated progress ring
- Task name and planned duration displayed above the timer
- **If coming from Check-In:** task name and time are pre-filled
- **If coming from Quick Action:** setup modal appears:
 - Quick preset buttons (25 min, 50 min)
 - Custom minutes input
 - Task name input
- Play/Pause button (centre)
- "End Session" button
- "Resume" option if timer was previously paused
- Haptic feedback and visual cue when the goal duration is reached

What You Can Do

- **Setup:** enter task name + duration → tap Start
- **During session:** tap Pause to pause, tap Resume to continue
- **End:** tap "End Session" → captures actual duration
- Background the app → timer state persists in MMKV, syncs on return

Where It Leads

- **End Session** → Session Rating screen (with duration data)

6. Session Rating

After every focus session, users rate how it went. This data powers the Progress analytics and helps FocusBuddy understand patterns over time. If the user struggled, they're offered immediate support via

the AI chat.

Session Rating

app/session-rating.tsx

What You See

- Task name recap at the top
- Duration completed (e.g., "25m 30s")
- "How was the session?" heading
- 4 rating options as tappable cards:
 - Great (green) — session went really well
 - Good (blue) — solid work
 - OK (amber) — got some things done
 - Struggled (orange) — had a hard time
- Optional notes text input
- "Save" button
- If rated "Struggled": additional "Talk about it" button appears

What You Can Do

- Tap a rating → selects it (highlighted border)
- Optionally type a note about the session
- Tap Save → creates session record, marks linked task complete, updates streak
- Tap "Talk about it" (if struggled) → navigates to AI Chat with pre-filled message

Where It Leads

- **Save** → Home Dashboard (updated stats)
- **Talk about it** → AI Chat (pre-filled: "I just struggled in a session...")

7. AI Chat Companion

The AI Chat tab provides a persistent, context-aware conversation with FocusBuddy's AI companion. Powered by GPT-4o-mini, it acts as a warm, supportive accountability partner — never judging, always encouraging. It remembers the user's goal, recent sessions, and emotional state.

AI Chat

`app/(tabs)/chat.tsx`

What You See

- Header: "Chat" with subtitle "Your focus companion"
- Welcome message on first visit: "Hey there. I'm here whenever you need me..."
- Scrollable message list (newest at bottom)
- Message bubbles:
 - User messages — right-aligned, purple background
 - AI messages — left-aligned, light grey background
 - Timestamps on each message
- Quick Actions row (horizontally scrollable):
 - "I'm stuck"
 - "I'm procrastinating"
 - "Break down task"
 - "I can't start"
 - "Show my progress"
- Text input bar at bottom with send button (up arrow icon)
- Typing indicator animation when AI is generating a response
- Rate-limit message if usage cap is reached

What You Can Do

- Type a message → tap send → AI responds via ai-chat Edge Function
- Tap a Quick Action chip → auto-fills and sends that prompt
- Long-press a message → option to delete it
- Scroll up to load older message history (paginated)

Where It Leads

- **Shame detected in conversation** → Shame Emergency screen
- **Otherwise** → user stays in chat or switches tabs

8. Progress & Analytics

The Progress tab gives users a clear visual picture of their focus habits. It's designed to motivate through data, showing trends, streaks, milestones, and session ratings over customisable time periods.

Progress Analytics

`app/(tabs)/progress.tsx`

What You See

- Header: "Progress"
- Period selector: This Week | This Month | All Time
- **Stat Cards** (3 across):
 - Total Focus (hours) with trend arrow
 - Sessions count with trend arrow
 - Avg Duration (min) with trend arrow
- **Focus Time Chart** — bar chart by day of week:
 - Bars coloured by duration (≥ 25 min = primary, < 25 min = secondary)
 - Average line overlay
 - Legend explaining colour coding
- **Session Breakdown** — horizontal stacked bars:
 - Great % (green)
 - Good % (blue)
 - OK % (amber)
 - Struggled % (orange)
- **Insights Section** — smart cards:
 - "Most productive day: Wednesday"
 - "Average session: 28 min"
 - "Total focus time: 18.5 hrs"
- **Milestones** — badge grid:
 - First Session (earned/locked)
 - 10 / 25 / 50 Sessions (with progress indicator)
 - 10 / 50 Hours (with progress indicator)
- **Recent Sessions** — list with task name, date, duration, and rating badge
- Empty state with prompt if no sessions yet

What You Can Do

- Tap period selector → filters all charts and stats to that time range
- Pull to refresh → re-fetches all analytics data
- Scroll to view milestones and session history

Where It Leads

- Users stay on this tab to review data, then switch tabs or navigate away

9. Promises to Yourself

The Promises feature builds self-trust over time. Users make one small daily promise to themselves and track whether they kept it. The Trust Score uses an exponential moving average (EMA) formula: **60% kept ratio + 20% streak bonus + 20% activity bonus**.

Promises

app/promises.tsx

What You See

- **Trust Score Card:**
 - Large circular progress ring with percentage
 - Trust label (e.g., "Building", "Solid", "Reliable", "Strong")
 - Score updates in real-time as promises are kept/broken
- **Today's Promise** (if not yet set):
 - Text input: "Make a promise to yourself"
 - Example chips: "I will open my laptop at 10am", "I will write for 15 min"
- **Today's Promise** (if set):
 - Promise text displayed
 - "I kept it" button (green)
 - "I broke it" button (with reason picker)
- **Promise History** — last 7 days:
 - Each day shows promise text, status badge (kept/broken), and date
- Pull-to-refresh enabled

What You Can Do

- Type a promise or tap an example chip → tap checkmark to save
- Tap "I kept it" → marks promise as kept → trust score increases
- Tap "I broke it" → reason picker appears:
 - "Too big", "Forgot", "Life happened", "Just couldn't"
- Select reason → marks promise as broken (no shame, just data)
- Pull down → refreshes history and trust score

Where It Leads

- Users return to Home or continue using other tabs

10. Support Screens

FocusBuddy has dedicated support screens for when things get hard. These activate automatically (AI-triggered) or manually, providing immediate, actionable help without any judgment.

Shame Emergency

`app/shame-emergency.tsx`

What You See

- **Phase 1 — STOP** (auto-advances after 3.5 seconds):
 - Large animated "STOP" text fades in
 - Subtitle: "You're in shame right now" fades in after 1 second
 - Back button appears after 3 seconds
 - Forces a pause — the user cannot skip this phase
- **Phase 2 — CHOOSE** (4 recovery paths):
 - ■ "Learn facts" → cycles through 7 shame-busting science facts
 - ■ "See evidence" → shows user's real stats (sessions, promises kept, streak)
 - ■ "Find tiny steps" → shows 4 micro-actions (stand up, get water, open file, 2-min timer)
 - ■ "Take a break" → routes to Bad Day Toolbox

What You Can Do

- Phase 1: Wait for auto-advance or tap back to exit early
- Phase 2: Tap any of the 4 recovery buttons
- "Learn facts" → cards auto-cycle through shame science
- "See evidence" → displays personal accomplishment stats
- "Find tiny steps" → tap a micro-action to commit to it
- "Take a break" → navigates to Bad Day Toolbox

Where It Leads

- **Take a break** → Bad Day Toolbox
- **Micro-action committed** → encouragement shown, then back to previous screen
- **Back** → returns to previous screen (Chat or Check-In)

Bad Day Toolbox

`app/bad-day-toolbox.tsx`

What You See

- Header: "Bad Day Toolbox"
- Heading: "It's okay. Let's find something small."
- **Category tabs** (horizontal scroll):
 - Physical (body-based actions)
 - Work (tiny work tasks)
 - Comfort (self-care activities)
 - Tomorrow (planning for tomorrow)
- Action cards for selected category:
 - Action name and description
 - Difficulty indicator: Very Easy / Easy / Medium (colour-coded)
- After committing to an action:
 - "I did it" button → success message with encouragement
 - "I couldn't" button → fallback suggestion (even simpler action)

What You Can Do

- Swipe through categories
- Tap an action card to commit
- Tap "I did it" → celebration and encouragement
- Tap "I couldn't" → app suggests an even easier alternative (no judgment)

Where It Leads

- **Action completed** → encouragement shown, user returns to previous screen
- **Back** → previous screen

11. Settings & Account Management

The Settings tab provides access to preferences, subscription management, profile editing, data controls, and account deletion. All preferences are persisted to the user's profile in Supabase.

Settings

`app/(tabs)/settings.tsx`

What You See

- **Profile Section:**
 - User avatar with initials
 - Display name and email
 - "Edit Profile" row
- **Preferences Section:**
 - Notification Time (read-only, set during onboarding)
 - Default Session Length (dropdown: 15, 25, 50, custom)
 - Celebration Style (Enthusiastic / Moderate / Minimal)
 - Theme (Light / Dark / Auto)
- **Privacy Section:**
 - Anonymous Sharing toggle
 - Analytics toggle
- **Subscription Section:**
 - Current plan badge (Pro / Free Trial)
 - Renewal date (if subscribed)
 - "Manage Subscription" or "Upgrade to Pro" button
- **Data Section:**
 - "Export My Data" row
 - "Delete Account" row (red text)
- "Restore Purchases" button
- "Sign Out" button
- App version footer

What You Can Do

- Tap "Edit Profile" → Edit Profile screen
- Change dropdowns/toggles → persisted immediately to profile
- Tap "Upgrade to Pro" → Paywall screen
- Tap "Export My Data" → Data Export screen
- Tap "Delete Account" → Delete Account screen
- Tap "Sign Out" → confirmation alert → signs out → Sign In screen

Where It Leads

- Each action navigates to its respective sub-screen (see below)

Edit Profile

`app/edit-profile.tsx`

What You See

- Header: "Edit Profile"
- Display Name input (pre-filled)
- Main Goal input (pre-filled from active goal)
- New Password input
- Confirm Password input
- "Save Profile" button
- "Change Password" button (appears when password fields filled)

What You Can Do

- Edit display name or goal → tap Save Profile → updates records
- Enter new password + confirm → tap Change Password → updates auth

Where It Leads

- **Save** → back to Settings (with updated data)

Delete Account

`app/delete-account.tsx`

What You See

- Header: "Delete Account" (red accent)
- Warning card (red-tinted):
 - "This action is permanent"
 - Explanation that all data will be deleted
- Recovery info card:
 - 30-day recovery window information
 - Permanent erasure notice after 30 days
- Confirmation input: "Type DELETE to confirm"
- Delete Account button (disabled until "DELETE" is typed exactly)

What You Can Do

- Type "DELETE" in the confirmation field → button becomes active
- Tap Delete Account → soft-deletes profile → signs out → shows alert

Where It Leads

- **Deleted** → Sign In screen (signed out)

Data Export

app/data-export.tsx

What You See

- Header: "Export Data"
- "Export Your Data" heading with description of included data
- "Request Export" button
- After requesting:
 - Success checkmark icon
 - "We're compiling your data..." message
 - Email confirmation note

What You Can Do

- Tap "Request Export" → fetches all user data records and queues export

Where It Leads

- **Export requested** → confirmation shown, user navigates back

Paywall / Upgrade

app/paywall.tsx

What You See

- Header: "Unlock FocusBuddy Pro"
- Tagline: "Get the most out of your focus journey"
- Feature list (4 items with green checkmarks):
 - Unlimited AI chat sessions
 - Advanced focus analytics and insights
 - Custom timer presets and routines
 - Priority support and early features
- Plan cards (side by side):
 - Monthly: \$20/month
 - Annual: \$120/year ("Best Value" badge)
- Selected plan highlighted with purple border
- "Subscribe Now" button
- "Restore Purchases" link at bottom
- Close button (X) in top-right if trial is active

What You Can Do

- Tap Monthly or Annual plan → selects that plan
- Tap "Subscribe Now" → initiates purchase flow (RevenueCat)
- Tap "Restore Purchases" → attempts to restore previous purchases
- Tap close (X) → returns to Settings

Where It Leads

- **Subscribed** → back to Settings (plan updated)
- **Close** → back to Settings

User Flow Diagrams

These diagrams show how the 21 screens connect into coherent user journeys.

Flow 1: New User Onboarding

Sign Up → Goal Setup → Notification Time → Trial Confirmation → Home Dashboard

Flow 2: Returning User Login

Sign In → Home Dashboard

Flow 3: Daily Check-In & Focus Session

Home → Daily Check-In → Timer → Session Rating → Home

Flow 4: AI Chat & Support

Home / Quick Action → AI Chat
If shame detected → Shame Emergency

Flow 5: Progress Review

Home / Tab → Progress Analytics (stats, charts, milestones, history)

Flow 6: Daily Promises

Home / Quick Action → Promises → Set promise → Mark kept or broken

Flow 7: Bad Day Recovery

Check-In ("Need a break") → Bad Day Toolbox
Shame Emergency → "Take a break" → Bad Day Toolbox

Flow 8: Account Management

Settings → Edit Profile | Delete Account | Data Export | Paywall

Flow 9: Password Recovery

Sign In → Forgot Password → Email Link → Reset Password → Home

Appendix: Screen Inventory

Complete inventory of all 21 screens in FocusBuddy, with file paths and categories.

#	Screen	File Path	Category
1	Sign In	app/(auth)/sign-in.tsx	Auth
2	Sign Up	app/(auth)/sign-up.tsx	Auth
3	Forgot Password	app/(auth)/forgot-password.tsx	Auth
4	Reset Password	app/(auth)/reset-password.tsx	Auth
